STRUCTURAL INSULATING PANEL SYSTEM
Better building ideas from PFB™

Technical Bulletin

BULLETIN NO. 113
ISSUED: May 27, 2014
REPLACES: June 17, 2010

Wall Panel Design Charts (2x Lumber Spline) - US Model Codes

This bulletin provides design loads for the Insulspan® Structural Insulating Panel (SIP) System when used as a component in wall systems designed in accordance with the 2012, 2009 and *2006 International Building Code*® and *International Residential Code*®. Structural testing of the Insulspan SIP System has been completed for this application using a third party testing laboratory following the requirements of ASTM E72, ***Standard Test Methods of Conducting Strength Tests of Panels for Building Construction.***

The attached **Wall Panel Design Load Charts** dated January 20, 2014 summarize design loads for Insulspan SIP wall panel applications with single 2x dimensional lumber splines (Table W-1-L) and double 2x dimensional lumber splines (Table W-2-DL). For each spline configuration, two transverse load tables are provided based upon top plate and bottom plate support conditions as noted in the table below.

Support Condition	Application Description	Insulspan Reference Details
End Support	SIP connection @ base for one story	100.02 to 100.07A
	SIP connection @ top for one story & SIP connection @ base for two story	200.01 to 200.02A
	SIP connection @ top for two story	300.01 to 300.03 and 300.10
Modified End Support	SIP connections as per end support application with additional connection to top & bottom plates as noted	OSB skins connected to top & bottom plates using #8 by 2-1/2" long wood screws @ 12" both sides of plates.
Face Support	SIP connection @ base for one story	100.01, 100.04, 100.06A
	SIP connection @ top for timber frame construction	300.04 to 300.07A, 300.11 and 300.11A

For wall panels subject to combined wind load and axial load, the following design checks are required for the required SIP thickness and span:

1. ***Design wind load*** is the component and cladding design value determined in accordance with the provisions of ***ASCE 7***.
2. **Deflection check** is performed by comparing 70% of ***design wind load*** against ***allowable wind load*** at L/240 table value for support condition used (i.e. end support or face support condition).
3. **Shear and connection strength check** is performed by comparing 100% of ***design wind load*** against ***allowable wind load*** at L/180 for support condition used.
4. **Bending strength check** is performed using the following unity equation with 100% of ***design wind load*** over ***allowable wind load*** at L/180 for face support condition plus ***design axial load*** over ***allowable axial load*** as follows:

$$\frac{f_c\_or\_Design\_Axial\_Load}{F_c\_or\_Allowable\_Axial\_Load} + \frac{f_b\_or\_Design\_Wind\_Load}{F_b\_or\_Allowable\_Wind\_Load} \le 1$$

For non-load bearing wall panels subject to wind load only use the load chart for applicable support condition to check 70% of ***design wind load*** against the L/240 ***allowable wind load*** and 100% of ***design wind load*** against L/180 ***allowable wind load***.

Revision January 20, 2014

Notes:

1. The tabulated values are design loads based upon design requirements of International Building Code® and International Residential Code®. Transverse load values printed in **bold type** are based on panel strength rather than stiffness.
2. Insulspan SIP System must be assembled as per Insulspan Installation Guide and recommended assembly details.
3. Acceptable 2x4 and 2x6 lumber for assembly of the Insulspan SIP System is SPF #2 or better; acceptable 2x8 and 2x10 lumber is Hem Fir #2 or better.
4. Insulspan SIP skins are nailed to the lumber splines at longitudinal panel joints, top and bottom plates using minimum 8d box nails @ 6" o.c. or equivalent.
5. Insulspan SIP System core material is molded expanded polystyrene (EPS) insulation complying with the requirements of ASTM C 578, type I.
6. Insulspan SIP System exterior skins are minimum 7/16" thick structural grade oriented strand board (OSB) conforming to DOC PS2, exposure 1.
